Continuation Sheet (PTO-303)

Application No. 10/762,962

Continuation of 3. NOTE: Applicant argues that Bailey et al. do not teach "a second dielectric layer located atop the resistive layer and the first and second contact pads", asserting that the terms "over" and "atop" are significantly different. Examiner agrees that the terms are different, but the use of "atop" in the claim does not overcome the Bailey et al. patent. As an example, a glass that is held over a table is not atop the table. However, a glass sitting on a coaster, which is on the table, is both atop the table and over the table. Moreover, if the term "atop" is taken to require direct contact, this would amount to a change of scope in the claims, requiring additional search and consideration.
